

Why Audit Management Software?

Audits are an important and essential part of managing food safety and quality effectiveness.

Our Audit Management software simplifies the process offering a web based and mobile app solution.

The outcome is an auditor notification system, audit reports that are automatically generated, corrective action management workflows and site results that can be visualized and analyzed within the software.

AuditHub supports all types of audits in your company including desktop audits, internal audits and mobile first and second party audits against your own standards or third party schemes, and displays the information gathered to user needs such as key staff, management and any other authorized users.

Driven by user permissions and secure data areas, access to historical or on-going audits are controlled, compared and viewed on a dashboard. Managing the non-conformity process is essential and ensuring proof of action and task closure can be regularly monitored via the software.

-  Suitable for multiple sites and teams of auditors
-  Auditor skills can be matched to relevant sites
-  Mobile App to collect data
-  Automatically generated audit report
-  Assess and benchmark outcomes

Facility Management

Audit tool for controlling multiple operations, sites, teams and vehicles

Checklists and Audit Forms

Fully configurable templates for compliance and percentage based scoring models

Skills Matrix Management

Map audits to skillsets and key (stakeholder) product categories/customer requirements

Workflow Management

Configure audit activities to match organisational workflows

Mobile & Offline Audits

Android enabled devices, photo evidence support, immediate scoring recognition

Technical Review Summary

Features allow desk audit capabilities and QA review of audit report/non-conformances raised prior to release to site/client

Corrective Action Management

Manage corrective action processes for non-conformant responses including the upload of documented evidence to support due diligence, real-time monitoring and historical views as well as the ability to add root cause

Reporting

Dynamic reporting across frequency and quantitative results

Dashboard

Configurable to users with real-time reporting

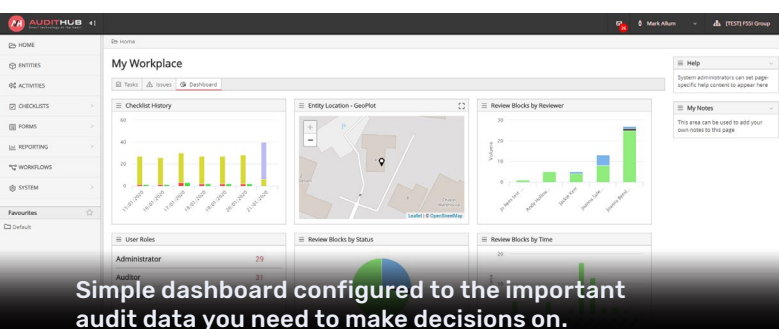

Security

User permission driven to data level security access powered by Microsoft Azure a trusted cloud service

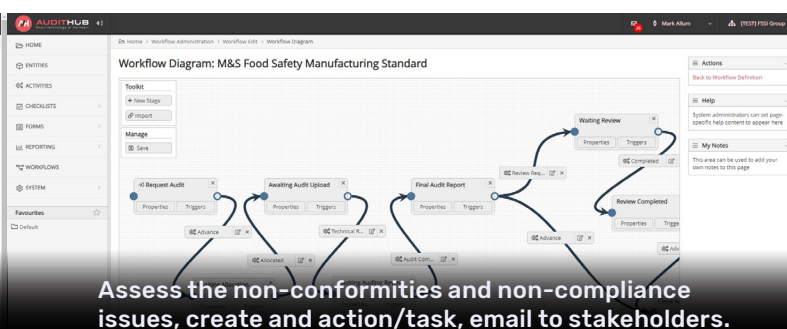

We help you implement and configure the software to your needs

We will make sure you know how to...

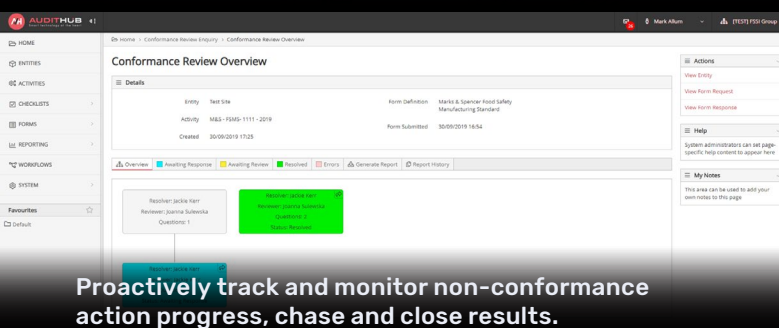

-  **assess what needs to be risk managed** through food safety and quality audits. We help define the audit assessments and inspections for products, process and people ensuring they are linked to policies, best practices and legislation (national regulations). This can cover your own operations or a supply chain and partner network.
-  **schedule** the frequency and duration of audits, the competency required (needed) of the Auditors and whether there are skills and training requirement gaps.
-  **build a workflow** for non-conformity management, clarification to responses, the continual improvement plan and identify the gap analysis between the audit results and desired best practice.
-  **make informed decisions** from the audit results and build plans to create a culture of continual improvement.

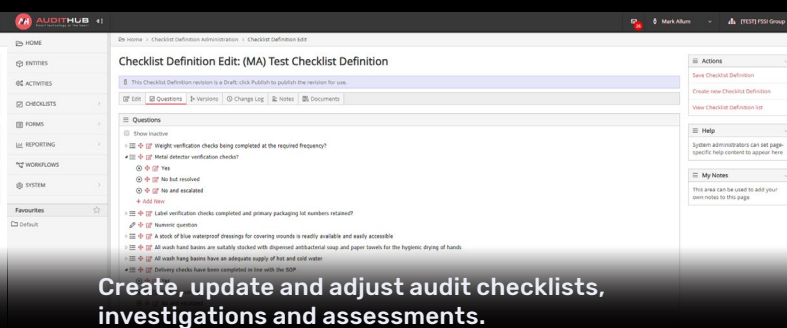

Simple dashboard configured to the important audit data you need to make decisions on.

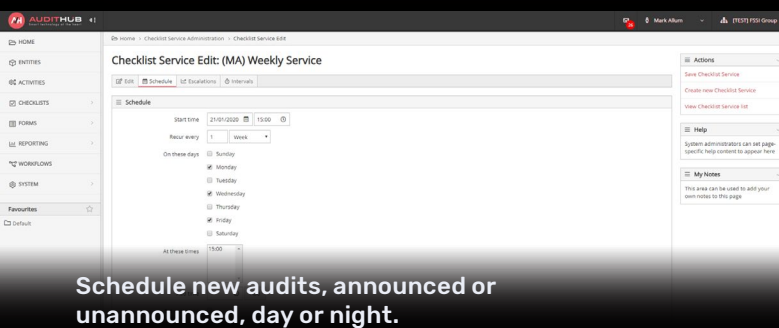

Assess the non-conformities and non-compliance issues, create and action/task, email to stakeholders.

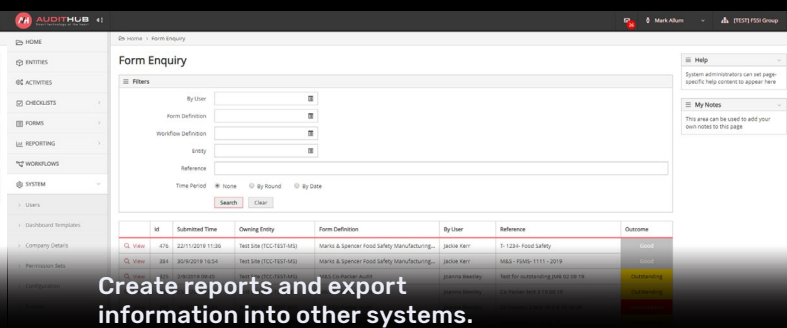

Proactively track and monitor non-conformance action progress, chase and close results.

Create, update and adjust audit checklists, investigations and assessments.

Schedule new audits, announced or unannounced, day or night.

Create reports and export information into other systems.

AuditHub software is designed to be configured to your operation and your audit needs. Contact us for a demo and a discussion on what you would like to measure, reduce, improve and monitor!
